LNG PIPELINE COMPRESSOR STATION

The Prince Rupert Gas Transmission pipeline plans to build 8 compressor stations – one near Utsun Creek on the Salmon River Road, 13 km northeast of Anspayaxw (Kispiox) village. This compressor station would operate 24/7 for 40 years, and would have 3 compressors, 3 generators, and 3 heat plants. Local air pollution would be 10 times greater than it is now. “Blowdowns” would vent pure methane, creating noise equivalent to a jet aircraft taking off. Compressor stations can catastrophically fail, leading to explosion and fire.

STOP THE PRGT!

Pipeline construction is slated to start in the Nass Valley, August 24.

Please write/call/email MLA, Nathan Cullen. Tell him that you do not want your health sacrificed to this project.

Nathan.Cullen.MLA@leg.bc.ca

Hazelton (250) 842-6338

Smithers (250) 847-8841

A compressor station pressurizes the gas in a pipeline to keep the gas flowing. In remote areas, compressor stations burn gas from the pipeline for power. It is the largest source of air pollution in the operation of the entire pipeline. Emissions create local methane-toxin smog.

Compressor station air pollution includes 36 substances known to be toxic to humans and wildlife. Studies have shown that these cause:

- Headaches
- Nausea
- Cancer
- Heart diseases
- Lung diseases
- Asthma
- Stroke
- High blood pressure
- Diabetes
- Reproductive/birthing problems
- Mental health issues
- Neurological disorders
- Sleep disruption
- Existing medical conditions can be made worse
